## GENERAL DESCRIPTION

The SGM8271 (single), SGM8272 (dual) and SGM8274 (quad) are high voltage operational amplifiers, which can operate from 4.5V to 36V single supply or from  $\pm 2.25V$  to  $\pm 18V$  dual power supplies. They provide a wide input common mode voltage range and rail-to-rail output voltage swing.

The SGM8271/2/4 provide high slew rate, low offset, drift and bias current.

The SGM8271 is available in Green SOT-23-5, MSOP-8 and SOIC-8 packages. The SGM8272 is available in Green SOIC-8 and MSOP-8 packages. The SGM8274 is available in Green SOIC-14 and TSSOP-14 packages. They are specified over the extended  $-40^{\circ}C$  to  $+125^{\circ}C$  temperature range.

**RECOMMENDED OPERATING CONDITIONS**

Operating Temperature Range .....	-40°C to +125°C
-----------------------------------	-----------------

**NOTE:**

1. Proper power supply sequencing is recommended for the CMOS device. Always sequence Vs on first, followed by the inputs and outputs.

**OVERSTRESS CAUTION**

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

**ESD SENSITIVITY CAUTION**

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.
